SUMMARY

Senior Frontend Engineer and Tech Lead with 7+ years of experience engineering scalable micro-frontends, distributed rendering systems, and reusable UI platforms. Proven track record of leading UI architecture across multiple squads, improving frontend performance, and integrating AI/LLM developer workflows. Author of peer-reviewed research presented at NAACL 2025.

SKILLS

Frontend Architecture: React 19, RSC, Next.js (App Router, PPR), TypeScript, Konva.js, Micro-Frontends, Design Systems, Tailwind, WCAG Accessibility, Web Vitals (INP, LCP)

Backend & Cloud: Node.js, Python, GraphQL (Apollo Federation), AWS (ECS Fargate), OpenSearch, REST APIs, Microservices

Engineering Excellence: LLM Agent Tooling, Playwright, Mocha, Datadog Observability, CI/CD Automation, Distributed Systems

EXPERIENCE

Senior Frontend Engineer

Cvent

May 2025 - Present, Remote

- Served as the frontend owner for 4 production micro-frontends, directing architectural decisions, RFCs, code quality standards, and end-to-end production delivery.
- Architected a reusable React form platform with drag-and-drop configuration, dynamic validation, localization, and accessibility, adopted by 3 product squads across engagement workflows.
- Partnered with backend engineers to scale an asynchronous PDF generation platform processing 1M+ cumulative artifacts via AWS ECS Fargate, and engineered a parallel browser-based rendering prototype using HTML-to-canvas, jsPDF, and ZIP packaging.
- Decoupled configuration reads from a monolithic GraphQL architecture by integrating an OpenSearch-backed service via Server-to-Server (S2S) calls, offloading ~50% of the payload and substantially improving configuration load times in development.
- Built a secure magic-link access flow, enabling users to retrieve generated certificates directly from email without requiring a full authenticated application session.
- Integrated LLM-driven tooling into internal developer workflows, introducing 3+ custom agent skills for automated test generation and delivering 3–5 minutes of self-reported time savings per use case.

Software Development Engineer 2A

Ciena

October 2022 - May 2025, Remote

- Architected and shipped 4 micro-frontends for an enterprise B2B SaaS platform, enabling autonomous squad deployments and increasing feature adoption by 15%.
- Re-engineered legacy Ember components into React, delivering a high-performance device management dashboard that reduced device setup time from 9 to 5 minutes and improved FCP by 40%.
- Built dynamic JSON hydration pipelines for configurable UI workflows, optimizing REST API integrations to sustain sub-500ms median latency.
- Engineered automated end-to-end test suites using Playwright and Mocha, slashing manual QA verification cycles by 95%.
- Designed comprehensive Datadog telemetry dashboards tracking client-side errors and network latency to maintain 99.9% UI operational reliability.

Senior Engineer

Nagarro

December 2018 - October 2022, Remote

- Developed 20+ reusable React components across enterprise design systems, integrating with Adobe Experience Manager (AEM) and Salesforce Marketing Cloud.
- Built an in-house interactive quiz platform to replace a third-party solution, integrating natively with Google Analytics and CRM services while preserving existing tracking schemas and eliminating intermediary data integrations.
- Built high-throughput Python and Node.js data validation and de-duplication pipelines deployed on AWS, paired with React proof-of-concept interfaces.

EDUCATION

Master of Computer Applications (MCA)

Guru Nanak Dev University • 8.7 / 10.0

PUBLICATIONS

Probing Audio-Generation Capabilities of Text-Based LLMs

Student Research Workshop • NAACL SRW 2025

- Investigated whether text-based language models exhibit latent audio-generation capabilities through systematic evaluation across speech, environmental sounds, and musical audio datasets.
